

OFF THE RECORD

NO MORE BRICKS

THE BRICK structure seems to have fallen out of favour with educational institutes that found it quite fascinating once upon a time. First it was CEPT University that made news when it decided to go for the remodelling of brick structure buildings designed by BV Doshi. Now Entrepreneurship Development Institute (EDI), which was designed by architect Bimal Patel, is following suit. "Maintaining a brick structure is an expensive affair. One has to be extra careful, too. Preserving the texture of outer-brick walls is difficult despite high maintenance. It gets eroded over time. So, we have decided to have non-brick structures as we are expanding the facilities inside campus," said a source.
